**1**

Supplier's name and model identifier.

**2**

 Energy efficiency indicator for an average climate. A better energy class can be achieved in some units when they are equipped with external humidity or CO<sub>2</sub> sensors used for demand control.

**3**

 Maximum air flow rate in m<sup>3</sup>/h at 100 Pa external pressure.

**4**

Sound power level. A-weighted sound power level at reference airflow at 50 Pa. (reference airflow = 0.7 x maximum airflow (3)).
